

The "Make Payment" use case allows the traveler to pay for the selected cruise reservation using one of the available payment methods, including credit card, PayPal, or direct deposit from a bank account. The system displays the payment options to the traveler. The traveler selects their preferred payment method. If the traveler selects "credit card" or "PayPal", the system prompts the traveler to enter their payment details, including card or account number, expiration date, and security code. If the traveler selects direct deposit, the system displays the bank account details for the traveler to make the payment. The system verifies the payment information provided by the traveler, ensuring that the payment details are valid and authentication requirements are met. If the payment is successful, the system updates the reservation status to "paid" and confirms the payment details to the traveler. If the payment fails, the system prompts the traveler to correct the payment information and try again.
